

Umicore's Ready-Stock™ findings consist of butterflies and posts made using our own quality plate and wire stock. Each butterfly carries our traditional IRSCO stamp as well as a stamp to warranty the karated metal.

Findings

Our butterflies are stamped with consistent hole diameter and matching of both "pinching curls" to securely fit over the associated post. Quality control tests are routinely conducted to ensure that the assemblies of all Umicore posts and butterflies have the strength to hold together.

Umicore posts are precisely shaped with a rounded "bullet nose" and notch for comfort and safety. Tight control of the wire diameter and the size and depth of the safety notch also ensure secure matching of the post and its related butterfly.
